	The Ivo Lola Ribar machine tool factory is situated in the village of Zeloznik, some 15 kilometers southwest of Belgrade and & kilometers from the main Belgrade-Obrenovae highway.			
	Contrary to local reports, the factory is still not in a full operating condition. One of the main buildings was to have been ready without fail by May 1949, and the work was under the direction of Engineer Vojislav Zadjina, a former professor at the University of Belgrade. However, owing to the shortage of time, unsuitable materials were used, and shortly after completion the whole building collapsed. Zadjina was held responsible and duly arrested.			
	The factory employs a total of some $3_0000$ workers, most of them unskilled and very young.			
	Up to the present, the factory's output has consisted of only one cutting machine, the so-called "Manut Schaere", which was delivered to the foundry and rolling mills in Zenica in March.			
	The factory's lack of production is due to shortage of necessary machines, materials and skilled workers.
